

PROFESSIONAL SUMMARY

- AI Engineer with 5 years of total software experience, including 1.4+ years in GenAI, Voice AI, LLM integrations, and production AI workflows.
- Hands-on experience building realtime voice AI systems involving STT-LLM-TTS orchestration, prompt engineering, AI agents, structured outputs, tool calling, and RAG-based workflows.
- Worked on production debugging, latency analysis, model/provider comparison, response quality improvement, and reliability fixes for conversational AI platforms.
- Brings strong production debugging, automation, and reliability experience from 3.5 years in QA Automation before transitioning into AI engineering.

TECHNICAL SKILLS

AI / LLM	OpenAI API, Anthropic API, Groq API, LLM integrations, function calling, structured outputs, RAG pipelines, embeddings, LLM response evaluation, prompt engineering
Voice AI	LiveKit Agents SDK, STT-LLM-TTS pipelines, Deepgram STT, Cartesia TTS, ElevenLabs TTS, SIP Telephony, Plivo, Twilio, conversational AI, interruption handling, call flow design
Backend	Python, FastAPI, REST APIs, WebSockets, async programming
Database	Supabase, SQL, vector DBs (Qdrant, Pinecone)
AI Engineering	LangChain, LangGraph, LLM evals, RAG evaluation, model/provider evaluation, latency analysis, cost/performance optimization
Automation	n8n, Selenium, Playwright
Tools	Git, Jenkins, MCP Server, Skills

PROFESSIONAL EXPERIENCE

F22 Labs AI Engineer	Jul 2023 – May 2026 Chennai, India
-------------------------	---------------------------------------

Voxi – AI Voice & Video Agent Creation Platform	Feb 2025 – May 2026
---	---------------------

Voxi is a customizable AI voice and video agent platform with plug-and-play LLM/STT/TTS providers, SIP telephony, tool calling, RAG workflows, and configurable agent behavior for business use cases.

- Worked as one of the founding engineers on Voxi, collaborating with one engineer and the CTO to design, build, and maintain the AI voice/video agent platform from scratch.
- Developed realtime voice and video agent workflows using LiveKit-based STT-LLM-TTS orchestration, achieving sub-2-second best-case end-to-end agent response latency.
- Built configurable provider selection for LLM, STT, and TTS services, enabling agents to switch models based on use case, latency, cost, response quality, and voice quality requirements.
- Designed core agent behavior flows including turn-taking, user interruption handling, agent interruption handling, tool calling, response constraints, and controlled conversation endings.
- Implemented platform capabilities for custom agent creation, SIP-based telephony integration, structured outputs, RAG-enabled workflows, call summaries, and conversation analytics.
- Instrumented latency tracking across STT transcription, end-of-utterance detection, LLM response generation, TTS time-to-first-byte, and overall agent response time to improve realtime performance.
- Debugged and improved platform-level conversation behavior, including skipped questions, delayed responses, incorrect tool-call execution, unwanted meta-text generation, and unreliable end-call flows.

Technologies: LiveKit Agents SDK, Supabase, TypeScript, Python, SIP Telephony(Plivo/Twilio), OpenAI API, Anthropic API, Groq API, Deepgram STT, Cartesia TTS, ElevenLabs TTS, RAG, Qdrant, Function Calling, Structured Outputs, Prompt Engineering

Additional AI Projects & POCs

- Evaluated STT, TTS, and LLM providers for AI voice workflows, comparing latency, accuracy, cost, response quality, streaming behavior, and integration complexity.
- Built LLM-based internal prototypes using prompt engineering, structured outputs, tool calling, and RAG workflows for automation and document question-answering use cases.
- Explored OCR-based AI workflows for extracting text from documents and images, then passing extracted content into LLM pipelines for downstream analysis.

- Compared model behavior across realtime voice agents, OCR/document intelligence, business automation, and interview workflows to identify suitable providers and implementation patterns.
- Technologies:** OpenAI API, Anthropic API, Groq API, Deepgram STT, ElevenLabs TTS, Cartesia TTS, OCR Pipelines, RAG Pipelines, LLM Provider Evaluation, STT/TTS Integrations, Function Calling, Structured Outputs
-

QA Automation Projects - Frank Darling, LuxUnlock and JW Pepper

Jul 2023 – Jan 2025

Role: QA Automation Engineer

- Designed and maintained Selenium-based automation test suites using Java, TestNG, Maven, and Cucumber across e-commerce and web application projects.
- Automated functional, regression, cross-browser, mobile responsiveness, and API test scenarios to improve test coverage and reduce manual regression effort.
- Validated backend APIs using Postman and RestAssured, integrated automation suites with Jenkins CI, and tracked defects using Jira/ClickUp.

Technologies: Java, Selenium WebDriver, TestNG, Maven, Cucumber, RestAssured, Postman, Jenkins

Fidelity National Information Services Inc. (FIS)

Aug 2021 – Feb 2023

Software Test Analyst

Bengaluru, India

- Worked on banking payment automation projects including **OPF NACHA** and **Silicon Valley Bank**, covering ACH/NACHA and SWIFT MT payment workflows.
- Contributed to OPF NACHA, a USA ACH payment product planned for rollout across 200+ banks.
- Developed and maintained Selenium-based automated test scripts for functional, regression, and release testing of payment application features.
- Maintained and executed an automated regression suite covering approximately 4,000 test cases.

Technologies: Java, Selenium WebDriver, Maven, SWIFT MT, ACH/NACHA Payments

EDUCATION

B.Tech, Computer Science & Engineering

Sir C R Reddy College of Engineering, Eluru

2017 – 2021

CGPA: 7.0

Intermediate

Narayana Junior College

2015 – 2017

Percentage: 98%

SSC

St Ann's E.M. High School

2015

CGPA: 9.8

CERTIFICATIONS

- Java – HackerRank
- Introduction to Relational Database and SQL – Coursera
- Android App Development using Java – E-Cell, IIT Hyderabad
- Speak English Professionally: In Person, Online & on the Phone – Coursera
